

DAVID AUSTIN {BRAND} ROSE INFORMATION

David Austin Roses are magnificent garden shrubs available in many colors. They are wonderfully fragrant, are repeat bloomers over a long season, and are highly versatile.

When planting your roses, we recommend using David Austin Mycorrhizal Fungi. It contains the mycorrhizal fungi and other helpful bacteria to encourage the roots of the plant to establish. This benefits the whole plant throughout its life, promoting stronger growth and more flowers. It also helps the roots of plants to extract water and nutrients from the soil. It is particularly helpful in poorer soils and when transplanting.

When planting as a hedge, space the shorter varieties about 1.5' apart and taller varieties about 3' apart. Adjust the height of the hedge by pruning.

When planting in containers, choose a large one to give the roots more room to develop and prevent the soil from drying out too quickly.

When planting in mixed borders, plant in compact groups of the same variety to create the greatest impact.

When planting in your landscape, position the most fragrant where the scent can be appreciated.

ALPHABETICAL LISTING OF OUR STOCK
