

# STAR {BRAND} ROSE INFORMATION

## Site Selection:

Choose a site with 4-6 hours of sunlight daily with good soil drainage and good air circulation.

## Soil Preparation:

We recommend a mixture of 50% existing soil and 50% organic matter such as compost, peat moss, or rose planting mix. The addition of bone meal, blood meal or timed release fertilizers will help your plant's roots get established.

## How to Prune:

Always prune with sharp clean shears. Cut the roses on an angle above an outward facing bud. Direct the cut to the outside of the plant to encourage denser growth. In spring, trim canes to 6-8', remove dead, damaged and crossing cane first.

## Winter Care:

This is important to spring growth. Apply a last round of fertilizer before the first frost. To protect from temperatures below 32 degrees, mound soil 6" above the crown, or cover with bark mulch or straw.

## Fertilize:

Fertilize with a granular fertilizer once the rose is fully leafed out. Fertilize again after the first bloom. Use time released rose fertilizer with systemic, such as Bayer Rose 3-n-1 on a regular basis to assure lush growth.

## Water:

Water your rose thoroughly after planting. Water daily for several days, then weekly. Monitor soil moisture throughout growing season.

## ALPHABETICAL LISTING OF OUR STOCK

Please call the garden center at 337.264.1418 to check availability.
